## Abstract of JP57033411

PURPOSE: To realize an automatic start of an initializing program, by automatically writing the serial numbers of a volume into a label in case the volume serial numbers to be read when a floppy disk is mounted is not defined yet.

CONSTITUTION: The contents of a volume label 7 of a disk 4 are read at an automatic volume recognizing function part 12 that received a mount signal of a floppy disk 4, and the contents of a volume label buffer 13 are examined. If no initialization is carried out, an indication for initialization to the disk 4 is given to a volume initialization setting function part 15. Then the volume serial numbers are written on a volume label 7 of the

disk 4 via a disk device 3.
